

Morouj Commodities Ltd choose Ocrim as their new partner

Founded in 2005, Morouj Commodities Ltd is considered amongst the largest companies in the food packaging, processing, importing, and exporting sector in Sudan, providing a diversified range of products to fulfil every brand promise to its stakeholders.

One year ago, the group decided to enter the milling market, entrusting Ocrim with the construction of its first milling plant, with the company at Morouj's side in this new and ambitious challenge.

A 600 TPD wheat plant will be built to obtain high quality flours to produce pasta and bakery products. It will be equipped with a 1200 tonne flour storage section, with an integrated 40 TPH mixing line that also allows the production of special flours through the addition of micro-ingredients.

The plant, with a high technological profile, will be configured with the innovative Modular Milling Concept, of which Ocrim is a pioneer. This system enables cutting-edge maintenance, as operators can shut the mill down in sections, resulting in greater productivity whilst also allowing greater flexibility for both planned or unexpected maintenance.

All of this was possible thanks to cutting-edge technological solutions for layout, plant engineering and automation. The management of the plant is, in fact, entrusted to Management@mill, the Ocrim management software useful to control, in real time, the performance of the entire plant.

First milling plant for new customers

More and more companies, already integrated in the agri-food market, are now approaching the milling sector for the first time. A thriving, but complex industry, which requires targeted and in-depth knowledge on the part of those who want to be part of it.

In this last period, Ocrim has received many requests - such as this one just described - from important companies that have decided to take a path that is new to them. But they are not sure of doing so with their own commercial experience. By making use of a serious ally like Ocrim, a well established player in the milling sector, this is no longer the case.
