

## The return of the compact mill

**Superior** is the compact that offers safe and versatile production solutions. It is sufficient to install it - already assembled at the **Ocrim** workshops - inside an industrial warehouse, thus reducing the costs for the construction of a multi-storey building and the bureaucracy required for urbanization works. It is a high energy performance system, which results in low production and management costs.

The compact mill is conceived and designed for customers with diversified business goals and paths. It is aimed at those approaching the world of milling for the first time, but also aimed at those who are already part of the agro-industrial reality of the mills and intend to have a compact plant, to expand or diversify their offer, to respond to the requests of specific and

niche markets, without upsetting or rescheduling its industrial production.

The first Superior was made by Ocrim in the 1950s from a pioneering idea, a compact and “intelligent” mill for grinding grain only, equipped with different capacities, which varied according to the composition of the desired model. Customization in the technical, technological and design set-up are the innovative features of the new compact mill.

The Superior will have the power to represent and interpret, even harmoniously, the needs, style and culture of the customer, and of the host country, starting from one of the four different options available: passion; natural, gold, and style.

The Superior is back in Ocrim in a futuristic form, from a technological point of view, and elegant, from a design point of view.

Given the interest and the number of requests, the company has dedicated a website to the Superior ([www.ocrimsuperior.com](http://www.ocrimsuperior.com)) through which it is possible to have all the desired information, and an e-mail address ([info@ocrimsuperior.com](mailto:info@ocrimsuperior.com)) to send the requests, as well as a brochure.
