

New goals in Africa for Ocrim

The 350 t/24h hard soft wheat green field milling plant for **Sanabel Group International** was successfully tested a few months ago, with the full satisfaction of the customer and the **Ocrim** team. A plant equipped with the latest generation technology, to meet the customer's needs related to food safety and energy saving. The Ocrim team took into account some specifications for a general optimization of the plant footprint. An intelligent design and cutting-edge machines, for this plant which is complete with a 420 t flour silo and a 150 t stor-

age for by-products, all managed by an automation system, also branded Ocrim, designed and built to simplify the activities of the mill.

The sales director, **Fabrizio Baccinelli**, claims that in Africa economic development is growing and Angola is becoming an important point of reference for the entire continent, thanks to virtuous industries such as the Sanabel Group, but also many others that have the strength and foresight to invest and enhance one's business not only for self-referential issues, but also for the collective community wellbeing.

Hassan Noureddine, CEO of Sanabel Group, is satisfied to have chosen Ocrim for this project: "It is the first time that we have entrusted ourselves to Ocrim. We have always heard of the Cremona-based company as one of the most reliable in the world and I must say that the result has exceeded the expectations. Ocrim is an attentive, innovative and punctual partner. And, to our positive surprise, the delivery times were respected, despite the complexities of the pandemic period".
